

dropmate

Dropmate is a small, ultra-low power jump counter designed to track the use of your parachute or harness. Always on and ready to detect a flight, the onboard sensors have been carefully designed to track the total number of jumps and the time, date, duration, and altitude of the beginning and ending of each flight. Dropmate never needs to have its batteries charged or replaced. Once installed and set up, the Dropmate will live its entire life in your canopy or harness.

Customizability

If altitude, date, and timestamps are confidential information, those records can be disabled in our app.

Remote Reading

Privately and securely view and export canopy data from Dropmate using our app, Dropmate for Android™.

Specifications

- | | | | |
|------------------|----------|---------------------|-----------|
| Length | 1.75 in. | Weight | 0.6 oz. |
| Width | 1.25 in. | Battery Life | > 14 yrs. |
| Thickness | 0.4 in. | | |

Altitude Monitoring

Document the starting and ending barometric altitude of each jump.

Flight Counting

Keep track of the number of jumps your gear has done.

Date & Timestamps

Automatically records the date and time of each jump.
